Profile

Tech enthusiast and aspiring software developer with hands on experience in building responsive and scalable web applications. Passionate about learning emerging technologies and applying problem solving and logical thinking to real world challenges. Currently seeking an internship to contribute to impactful projects while growing as a well rounded developer.

Skills

- **Frontend:** React.js, React Native, Angular, JavaScript, Typescript, Tailwind CSS, Vite
- **Backend:** Node.js, Python, Java
- **Database:** MongoDB, MySQL, WatermelonDB
- **Tools & Practices:** Git, GitHub, VS Code, RESTful APIs, JWT Authentication, Vercel, Netlify, Render, DevOps, Cloud Computing, AWS, OOP, Agile.
- **Professional:** Problem Solving, Team Collaboration, Communication, Leadership

Projects

Performance & Development Tracker (PDT) | Full Stack Developer

A role-based performance appraisal system with confidential 360° feedback, built for a client scenario in a four-person Agile team. It lets colleagues review each other without their identity being traced, with access controlled by the organisation structure and every sensitive action audited.

Key Contributions:

- Designed the system's layered architecture, from a dated organisation model up to supervision, visibility and reviewer eligibility, so later features fitted without rework
- Built most of the server side of the review cycle, including reviewer identity removal, HR coverage, result publication, identity reveal and an append-only audit trail
- Enforced every access rule on the server, limiting HR officers to the units they cover and logging every sensitive action for the Head of HR
- Replaced open account creation with an invitation and activation flow, so no unauthenticated request can create an account or assign a role
- Designed a rating normalisation model that compares each supervisor's rating with their usual leniency and peer feedback, prompting them to replace, justify or escalate outlier ratings to HR
- Deployed the client and API to Vercel with separate development, test and live databases on MongoDB Atlas

Technologies: React, Vite, Tailwind CSS, Node.js, Express, MongoDB, Mongoose, Yup, Playwright, Vercel, Jira

ExpenseTracker: Offline-First, Personal Finance Management | Mobile App Developer

A comprehensive offline-first, fully on-device expense tracking application that enables users to monitor spending, plan budgets, automate recurring transactions with advanced scheduling, and import bank transactions from SMS using on device AI.

Key Contributions:

- Architected a scheduled transactions system supporting multiple recurrence patterns with flexible configurations including custom intervals, end dates and occurrence limits
- Built sophisticated scheduling logic handling instance rescheduling, flexible skip operations, bulk overdue payments and pause/resume
- Audited and redesigned the scheduling engine with timezone-safe date calculations and a single source of truth for instance state, resolving 10+ calendar and state bugs
- Ensured payment integrity so double taps or crashes can never record a payment twice or leave schedule out of sync.
- Built automatic SMS transaction import that parses bank messages entirely on-device using AI, so no financial data leaves the phone
- Optimized on-device inference with grammar-constrained output, prompt caching and a regex pre-filter, and designed a two-phase background import with deduplication

Technologies: React Native, Expo, TypeScript, WatermelonDB, llama.cpp

School Route Management System | Full Stack Developer

A transportation management platform for schools, streamlining route planning, driver assignments, and automated stakeholder communication.

Key Contributions:

- Extended backend APIs and frontend components following established architecture
- Implemented additional CRUD operations and corresponding UI components
- Integrated document management and WhatsApp notifications.
- Built upon the initial system architecture and improved the existing codebase

Technologies: React.js, Node.js, MongoDB, TailwindCSS, Twilio WhatsApp API

Drug Prevention and Management System | Full Stack Developer

A web based application to streamline drug related case management, enabling secure collaboration among stakeholders like police, drug prevention authorities, courts, and rehabilitation centers.

Key Contributions:

- Designed a centralized case management system with role based access control for secure data handling.
- Implemented JWT based authentication and anonymous public reporting features.
- Built an interactive, responsive frontend using React, Vite, and Tailwind CSS.
- Built a RESTful API to support front-end interactions, ensuring smooth data flow between the server and user interface.

Technologies: React.js, Tailwind CSS, Vite, Node.js, MongoDB

KeepUp – Modern Challenge App for Habit Tracking | Full Stack Developer

A modern web application that empowers users to build and sustain positive habits through personalized challenges and real time progress tracking.

Key Contributions:

- Developed a scalable MERN stack architecture supporting role based access and secure authentication with JWT and bcryptjs.
- Built a feature rich challenge system with streak tracking, daily check ins, calendar view, and celebration prompts.
- Designed a responsive and modern UI with dark/light themes, collapsible sidebar, and intuitive dashboard.
- Created admin features including template & challenge management and user management interface.

Technologies: React.js, Node.js, MongoDB, TailwindCSS, JWT, bcryptjs

Education

BSc (Hons) Computer Science

University of Staffordshire (APIIT)
2026 - Present

Diploma in IT

British Computer Society (HEQ)
2023 - 2025

Trainee Full Stack Developer

University of Moratuwa (CODL)
2022 - 2024

Certifications

- HEQ Diploma in IT | BCS
- HEQ Certificate in IT | BCS
- Trainee Full Stack Developer | UOM (CODL)
- Foundations of Cybersecurity | Google
- Play It Safe: Manage Security Risks | Google
- Connect and Protect: Networks and Network Security | Google
- Introduction to DevOps | IBM
- Introduction to Cloud Computing | IBM
